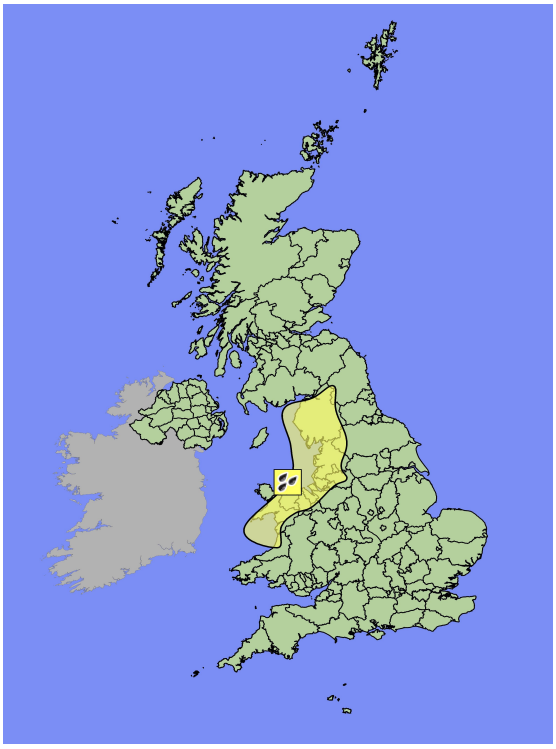
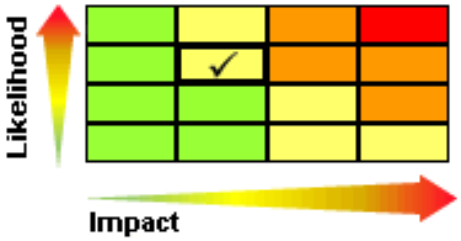
National Severe Weather Warning Service





Chief Forecasters Assessment
A relatively deep depression moving northeastwards from Ireland to Scotland on Thursday and Friday will bring further spells of heavy rain to many regions. This depression will also bring rather windy conditions across England and Wales on Friday. Around 15-25mm of rain is expected to fall quite widely. There is some uncertainty as to whether northwestern Wales or northwest England will bear the brunt of the heavy rain, but where the heaviest rain does occur in excess of 50mm could fall locally over high ground.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Fri, 22nd Jun 2012** until **23:59 on Fri, 22nd Jun 2012**

Spells of heavy rain are expected to move north across the area during Thursday and Friday, with some large totals likely to build up by Friday. The public should be aware of the potential for localised flooding.
